ELECTRONIC CURRICULA

CMVM provides extensive electronic support for undergraduate and postgraduate students studying in the College and academic and administrative staff associated with teaching and course management. This support is in the form of Virtual Learning Environments (VLEs) for the MBChB (Edinburgh Electronic Curriculum (EEMeC)), for the BVM&S (Edinburgh Electronic Veterinary Curriculum (EEVeC)), for the BSc Medical Sciences (EMSEC) and for postgraduate students and their supervisors (Edinburgh Electronic Postgraduate Portfolio (EEPoP)). There are also VLEs for a number of online distance-learning postgraduate programmes (MSc Surgical Sciences and MSc Clinical Education).

These VLEs form part of a blended learning environment designed to provide the best of face-to-face teaching with electronic support where it can enhance the quality of the learning experience. The VLEs provide a searchable database of information underpinning teaching and learning resources and interactive activities, discussion forums, features to promote independent, self directed and reflective learning practices, notice boards, timetables, self assessment activities, portfolios, course administration tools, and gateways to University library and external resources.

Students and staff are able to access the VLEs via the Internet and so have global, 24h access.
